In its mitigation efforts, the CE and BA implemented additional administrative and technical safeguards to better protect sensitive data.
Langdon Prairie Health, the covered entity (CE), reported that it experienced a breach when an employee included the protected health information (PHI) of 1,152 individuals in quality assurance reports in violation of its minimum necessary policy. The PHI involved included medical record numbers, dates of birth, dates of service, health care providers, diagnoses, and other treatment information. The CE notified HHS, affected individuals, and the media. In its mitigation efforts, the CE amended and clarified its minimum necessary policy, trained staff on the revised policy, and sent out reminders to department directors not to include PHI in quality assurance reports.
The covered entity (CE), WPM Pathology Laboratory, Chartered, reported that it experienced a hacking incident that affected the protected health information (PHI) of 5,694 individuals. The PHI involved included names, dates of birth, addresses, drivers' license and Social Security numbers, and diagnoses and conditions. The CE notified HHS, affected individuals, and the media. In response to the breach, the CE implemented additional administrative, technical, and security safeguards.
The covered entity (CE), Cardiology Associates of Fredericksburg, reported that it experienced a hacking incident that compromised the protected health information (PHI) of 75,476 individuals. The PHI involved included clinical and demographic information. The CE notified HHS, the affected individuals, the media, and provided substitute notice. In response to the breach, the CE implemented additional administrative, technical, and security safeguards to better protect its PHI.

Highland Rivers Behavioral Health, the covered entity (CE) reported that its business associate was the subject of a cyber-attack that affected the protected health information (PHI) of 2,253 individuals. The PHI involved included names, addresses, claims and financial information, and other treatment information. The CE notified HHS, impacted individuals, and the media. In its mitigation efforts, the BA implemented additional administrative safeguards to better protect sensitive data.
Alternate Solutions Health Network, LLC, the covered entity (CE), reported that an employee was the subject of an email phishing scheme that compromised the protected health information (PHI) of 93,589 individuals. The PHI involved included names, addresses, dates of birth, drivers' license and Social Security numbers, diagnoses/conditions, lab results, medications, and other treatment information. The CE notified HHS, affected individuals, the media, and posted substitute notice on its website. In its mitigation efforts, the CE implemented multi-factor authentication and provided additional employee training on phishing campaigns.
The business associate (BA), Scharnhorst Ast Kennnard Griffin, P.C., reported that an employee was the target of an email phishing scheme that affected the protected heath information (PHI) of 639 individuals. The PHI included demographic, clinical, and financial information. The BA notified HHS, affected covered entities, and the affected individuals. In response to the breach, the BA implemented additional administrative, technical, and security safeguards.
